RESEARCH INTEREST

My research interest lies at the intersection of **control, robotics, and learning**. My research aims to develop intelligent autonomous agents with **deep reinforcement learning** frameworks in either industry (e.g., robotic manipulation and autonomous driving) or human society (e.g., navigation among crowds and multi-agent motion planning). I am interested in making the end-to-end reinforcement learning algorithms applicable both in simulated and real worlds. Applications of my research include motion planning of snake robots, balancing control and motion planning of wheeled bipedal robots, navigation with quadruped robots, and robotic manipulation.
