RESEARCH INTEREST

My research interest lies at the intersection of **control, robotics, and learning**. My research aims to develop intelligent autonomous agents with deep reinforcement learning frameworks in either industry (e.g., robotic manipulation) or human society (e.g., navigation among crowds).

I am interested in making the end-to-end reinforcement learning algorithms applicable both in simulated and real worlds. Applications of my research include **motion planning of snake robots, balancing control and motion planning of a wheeled bipedal robot, navigation with a quadruped robot, and robotic manipulation**.
